CONTROL Options

STANDALONE SENSOR CONTROLS (OPTION: -MCP/-MCW/-MCD)

PASSIVE INFRARED BI-LEVEL MOTION & DAYLIGHT (OPTION: -MCP)

A PIR (Passive Infrared) sensor is capable of detecting variations in infrared radiation, which depend on the temperature and surface properties of objects in its field of view. This sensor has a 3-step dimming function, which is ideal for areas needing gradual light adjustments before a complete shutdown. Additionally, if the daylight function is activated, the sensor can turn off the light based on a preset level of ambient light. The settings for these functions can be fine-tuned using an optional wireless commissioning device.

Option: -MCP

Option: -MCW
SKU: SE-BC-ANT54T

Option: -MCD
SKU: SE-BC-ANT54TVAL

MICROWAVE BI-LEVEL MOTION & DAYLIGHT (OPTION: -MCW)

Microwave occupancy control sensors are designed to detect motion through materials such as plastic, glass, and thin non-metallic substances. They are equipped with a 3-step dimming function that is ideal for areas where gradual changes in lighting are preferred before a complete shutdown. If the daylight sensor feature is activated, it can turn off the light based on predetermined levels of ambient light. The settings for these functions can be adjusted using an optional wireless commissioning device.

OPTIONAL

SKU: SE-BC-RC-100

MOTION AND DAYLIGHT HARVESTING (OPTION: -MCD)

In addition to all the features offered by a microwave bi-level occupancy control, daylight harvesting control further reduces the use of electric lighting in building interiors when natural daylight is available. This function adjusts the artificial lighting levels based on the amount of natural light entering the space, enhancing energy efficiency and providing a more sustainable lighting solution.

NETWORKED LIGHTING CONTROLS (OPTION: -WBP/-WBN)

Network Lighting Controls (NLC) offer Luminaire Level Lighting Control (LLLC) based on Bluetooth-enabled Mesh Networking of Luminaires. Individual addressability enables luminaires to be communicated with each other within the zone/network. Luminaires can be grouped, trim and controlled by using the smart device app or connected wall switches. Scheduling, scene and sensors can be added for automation among the lights within the zone/group.

- (-WBP) Wireless bluetooth networked control with PIR occupancy and daylight harvesting sensor
- (-WBN) Wireless bluetooth networked control (node only)
